Blueberry Sprayers with Wrap Around Technology

Spray more acres per day with the best possible coverage for the least cost per acre.

With spotted wing drosophila pressure rapidly becoming a constant threat in blueberry production, blueberry growers are facing new challenges in keeping spray costs down, while protecting their high-value crop. Some have found the solution in the ON TARGET spraying system. The system’s wrap around coverage provides unprecedented protection from SWD, and improves the performance of your fungicide and foliar nutrient applications, as well. With an ON TARGET sprayer, you get complete uniform coverage with just 15 gallons of water per acre, enabling you to treat 2 to 3 times more acres each day, while improving the performance of your crop inputs.

CONVENTIONAL: 33 acre Blueberries with 50 gallon tank

ON TARGET: 10 TANK FILLS

Our sprayers feature the On Target patented spray nozzle that uses an electrical charge to create a fine mist of uniform, electrostatic droplets. Since all droplets have the same charge, they repel each other, creating a fine spray mist less prone to runoff and coalescence. The opposite charges of the plant attract the particles to it, drawing the spray deep inside the plant’s canopy.

The Savings are Real. How much could you save?

**COMPARISON:** 33 acre Blueberries with 50 gallon tank

**CONVENTIONAL:** 66 TANK FILLS

33ac x 100GPA = 3,300 Gallons of water
3,300 Gallons/50g tank = 66 tank fills

**ON TARGET:** 10 TANK FILLS

33ac x 15GPA = 495 Gallons of water
495 Gallons/50g tank = 10 tank fills.

On Target Electrostatic spray manifolds were designed to be reliable and flexible.

Position the spray tube to the ideal height, angle or location of your canopy. The heavy duty white polymer tube protects the internal manifold from sun, chemicals, water and physical abuse. Our electrostatic manifolds have endured the rigors of Agriculture for more than a decade and proven most reliable. Putting the spray in the canopy and keeping it there makes this the most efficient and environmental sprayer on the market.

No need to waste your spray and your time.

Get On Target.
